

ND Pharma & Biotech

A World of Possible **Close To You**

ND Pharma & Biotech is a Global Research –Driven Organization and a leading supplier to the pharmaceutical, healthcare and life-science industries. Our products and services are transforming industrial processes and sectors creating opportunities to our clients and their customers all around the world. We are concerned with the mission of our existence, that's Making Life Better.

ND Pharma & Biotech

ND Pharma & Biotech has made a commitment to give more hope to the life of today and tomorrow. Bringing ingredients, active principles and novel molecules to the different industries and sharing with most of them, (our clients) such commitment, to let themselves to create, manufacture, and deliver the most advanced solutions to worldwide patients and let them to treat and fight against their aggressive conditions and diseases, specifically in the case of cancer. (Oncology), Neurosciences, Rare and Ultra-Rare Diseases, Food, Nutrition, Agriculture, Fisheries, Pharma, Medical, Healthcare, Research and Development, Innovation, Beverages, Animal Health and a varied number of sectors and fields.

We help Industry and our customers to create really innovative solutions that will make the difference, improving genuinely their lives and the life of affected people and promoting excellence in disease prevention and health maintenance. To get these things possible we are embraced in a number of high-profile / top-class investigations and research, focusing on the discovery of novel molecules and therapies designed and engineered for unmet medical and health demands and conditions, including but not limited to certain types of cancer and oncological diseases as solid tumors, like pancreatic cancer, breast cancer and advanced renal cell carcinoma, as well as other hematological/oncological conditions, Alzheimer’s Disease, Schizophrenia, Depression, Multiple Sclerosis, Lateral Amyotrophic Sclerosis, Infections, Tropical Health, Stem Cells, and a multiple-lines of open investigation and innovation.

ND Pharma & Biotech at-a-glance

We provide and support industry with active pharmaceutical ingredients both chemically and biotechnologically. Biopharmaceuticals are one of the key growth basements of the pharmaceutical and biotechnological industries.

ND Pharma & Biotech developed high performance molecules, both large and small, peptides, amino acids, and niche bioproducts that play an important role in the development of novel medicines, healthcare products, and other important milestones that make our lives better. Furthermore, our company is a leading provider of chemical and biotech ingredients to the nutrition, hygiene, preservation, agro and personal care markets.

Our culture of service and professional reputation is valued by all our deeply appreciated customers today.

Since our inception to the present day we combine cutting edge R+D+I with the experience of our dedicated team, a driven group of professionals with a motivated and entrepreneurial character able to adapt the offerings in product and services to the needs of customers and the ever-changing technological environ.

The following pages will give you an overview of our main operational markets and the principal areas for our business from Pharmaceuticals, Research, Biotechnology, Food & Nutrition, Agribusiness, Materials and Construction, Personal Care, and many others.

Our Reference Product Catalogue is over 200.000 articles today, with an impressive stock of 11.500 pre-packed and ready-to-go products, including the latest developments and branded products we place on sale.

ND Pharma & Biotech

BIO-RESEARCH

Bioresearch Markets are part of our target with cell and molecular biology products and other references for basic drug discovery and applied research.

Products and Services to make from your research experience an optimal one.

But our mission, do not appear only when the disease is onset and clinically evolved. We are going further back to the point of participate throughout our Food & Nutrition Division, on the most extensive detoxification programs and products (broad consumption), till the point of making possible our vision of removal the chemical – toxic elements and cellular waste deposits present within our body, and coming up from the food and alimentary chain, mean, ingested within foods. In this effort we are praying to get every producer, processor or seller involved with this ideal, that are for us the true reason for living and doing what we do, and every other effort that we should have to do,. By such means we are promoting and cultivating the meaningful spirit of making life better, just making things much better than any others are doing it now. That is the hope for tomorrow that challenges us.

Life-Sciences Research is always in need of different tools to discover biological pathways and to develop new drugs and therapies for illnesses and diseases, from common to rare and ultra-rare. We provide with such tools to academic, institutional and research +innovation centres worldwide.

Products and Services for Life-Sciences

As far as we are a research-based/commercial-stage biopharmaceutical company dedicated to the identification, development and commercialization of novel therapies that improve function in people affected by a number of medical conditions in a variety of complexities and situations, no matter what clinical stage they reached as it happens in multiple sclerosis, or MS, spinal cord injury, or SCI, and other disorders of the nervous system, as example, we have a deep and thorough understanding of research needs. We have marketed evolutionary active principles and molecules as well as developmental stage products and are working to bring important new therapies to people with different disorders. Our goal is to help patients to a better future, while building a leading neurology company with a portfolio of innovative products.

We help scientists and researchers around the world to develop work that let them to discover new therapies and treatments for life-threatening conditions and diseases and therefore to save lives.

From certain technologies to product standards we deliver a complete range of reagents, molecules, consumables, etc. to meet the needs of our customers within this complex and ever-changing environment.

For drug discovery we offer products and services regarding to specific conditions and research related areas such as Alzheimer's Disease, Oncology, Central Nervous System, Cardiovascular, Respiratory, Obesity and other including certain rare and ultra-rare syndromes.

As example, Approximately 400,000 people in the U.S. suffer from MS, and each year approximately 10,000 people in the U.S. are newly diagnosed. Research indicates that 64% to 85% of those people experience walking disability and that 70% of people with MS who have difficulty walking report it to be the most challenging aspect of their MS. Within 15 years of an MS diagnosis, 50% of people with MS often require assistance walking and, in later stages, up to one third are unable to walk. Even in early stages of the disease, walking can be a significant issue; one study found that 28% of people reported walking disabilities within two years of MS diagnosis. In the European Union (EU), approximately 600,000 people suffer from MS, and an additional 55,000 to 75,000 people in Canada are also diagnosed with this disease.

We are developing what we believe is an industry leading pipeline of novel therapies. We are developing novel treatments for selected, refractory patients with epilepsy, schizophrenia and/or headache, facial pain and trigeminal neuralgia as well as others based on stable regimens of anti-epileptic drugs, or AEDs, or single-dose treatment for those who require intermittent use of certain molecules to control bouts of increased activity also known as cluster or acute repetitive episodically onsets, or AREO's. We are also studying new treatment frontiers to improve a range of functional impairments, in addition to walking disability, caused by MS, as well as its potential use of other peptide and non-peptide derived molecules in other neurological conditions, including cerebral palsy and post-stroke deficits. In addition, we are developing clinical stage compounds for acute treatment of SCI, different novel approaches for treatment of heart failure, and a highly promissory compound and formula based on a specific remyelinating monoclonal antibody, for the treatment of MS.

We support emerging and well-established companies and innovation centres in the pursuing of novel therapeutics at all the involved stages from commercial supply to manufacturing placing our expertise and technology to customer's service to reach top quality products.

Creating new opportunities in the discovery of novel therapies,... turning it into real cures.

We vigorously invest in research, development and innovation to discover and develop new products and eventually, new treatments that meet the needs of specialty doctors and their patients.

Our company try to develop world-class research + development + innovation (R&D) programs that embodies our efforts to bring the best of science to medicine and therefore to life, including some new developments within the nutrition science, food, feed and certain industrial sectors.

Scientists and researchers work closely with specialists within their respective areas, to transform novel compounds into new therapeutics and products that help improve quality of life. This philosophy is consistent with our motto; Making Life Better.

Our commitment to R&D has been evident since our inception, when we began pioneering new treatments to help preserve certain organic and body functions including neurological functions as memory and cognoscitive abilities. Since then, our investment in R&D+i has progressively increased to a level that is considered best in class for the industry, and we have followed our products into new specialty areas.

Our R&D+i programs today are focused in many areas ranging from diabetes and nutrition to surgical innovations. Currently, we are investigating a rich arsenal of potential new treatments for chronic migraine, debilitating neurological conditions, eye disease, and stem cell transplantation, among other conditions and fields.

Products and Services for Biotech & Pharma

Since founding, our company retains the ability to listen and to learn - from our customers, and from each other - has been a cornerstone of our success. ND Pharma & Biotech's R&D+i culture reflects this, providing an open forum for our and other scientists to share ideas, collaborate on projects, and gain access to the latest research.

Access to world-class technology combined with intellectual stimulation results in a dynamic environment where scientists are excited about the work they do and committed to pushing the boundaries of what is possible.

Our R&D+i organization is structured into integrated teams that focus on discovery for different targets. This unique architecture affords many benefits. Scientists normally confined to specific tracks have the opportunity to be involved in the full life-cycle of development, from early-stage exploration to human testing, for a much broader perspective. Additionally, meticulous research is streamlined with highly efficient project and information management, which can save years and millions of dollars from the overall cost of drug development.

Most of our discovery and development programs are initiated internally, which sets us apart from many other health care companies. Simultaneously, we explore new market opportunities and search for partnerships to develop superior technologies that are complementary to our own business model.

In short, at our company, there will be only one way in which we view the purpose of science and innovation - to identify those needs in health care and certain industrial sectors that are unsolved and commit to finding solutions through a meaningful R&D+i investment that fuels future growth. This is our unwavering commitment.

For every new treatment/product that comes to market, hundreds of important discoveries are made along the way that contribute to science, medicine, health and technology. For these contributions and many others, ND Pharma & Biotech provides several opportunities for our scientists to be recognized and rewarded for excellent work in their respective fields and broadly.

Partner of Choice

ND Pharma continues to be the partner of choice for customers looking for an edge in the pharmaceutical and biotech market. Our industry-leading products and services have helped companies of every size, at every stage of development increase quality, enhance their manufacturing processes, remove bottlenecks, reduce time to result achievement, improve regulatory compliance, and lower assay and production costs.

Quality Through Innovation

Innovation is within our nature. It is the way we work, which is why we are able to offer the pharmaceutical and biotech markets advanced technologies that transform life science into new possibilities. We know and recognize that every organization has its own unique needs and such needs are likely to change over time as organizations evolve thoroughly. So throughout our relationship, we innovate, we remain flexible, we adapt and we continue to adjust as goals and objectives may change to reach success.

To add value to our customer's products and formulas is at the core of our Food & Nutrition Division. We include Food, Feed, and Health (Special Nutrition, Hospital Nutrition), and many other sections of the Division within the scope of this important area for us.

Nutritional Ingredients, Special Formulas, Improved Molecules, Food, Nutrition, Health, ... Every aspect count for us.

Our division of Food & Nutrition is gaining development every day and awakening conscience about the urgent necessities of the modern world and society. We are living and experiencing a world boom ahead of us in terms of population, health, fight to the poverty and famine, and other important political, economic and social issues. Within this future, food and healthy foods for a correct nutrition will have to be supplied to more and more people every day. We want our products being part of this evolution, and this is why we research and developed products, services, ingredients and other important creations to make food, nutrition and health, more accessible to consumers, giving extra quality and safety to foods, specially those processed and elaborated, helping industry to avoid chemical-toxic substances with a high potential harmful effects and its use within the manufacturing and processing of such products.

This is why we are adhered to the Green Chemistry Initiative, taking leader positioning in the global approach to chemical substances management, engaging with all industry operators into a new wave of thinking and action to develop and promote an effective, scientific and risk-based approach to the use of toxic chemicals within our everyday live, specially foods.

Nutrition for Health, Nutrition for Life

Unique Knowledge

Our company has taken contact with a number of national, regional, local and state agencies and regulatory bodies to ensure that rational, scientific and risk based approaches to chemical management and assessment are embodied into federal and state legislation and regulations, that informed substitution is the centerpiece of alternative assessment about the concerns rising from the massive proliferation of chemicals that actually is not managed both effectively and efficiently.

Unique Solutions

Our company is constantly exploring some of the most important food and chemical-related science policy issues to generate enough documentary evidence and attract to consumers to take action and responsibility thru key scientific articles, regulation considerations and food and beverage applications as well as market insights.

The commitment of ND Pharma & Biotech Pharma is much more than a commitment with product quality. It is a firm commitment to the perfection of a complete line of products ranging from those that stay and maintain fresh and tender food commodities to the methods, products and technologies capable of removing bacteria, toxic chemicals or radioactive elements from foodstuffs.

Our products are made to fit the needs of our customers and composed with authorized ingredients worldwide and regarded as GRAS / E (Generally Recognized As Safe / Effective) by bodies such as the American FDA and European EFSA.

Our real interest is in the development and realization of finished products to obtain the best results possible without the intervention of toxic substances - chemicals that have been included and are still present in many food commodities worldwide, (sometimes hiding the presence of those to the authorities and consumers).

Our products are developed in a clear commitment with the highest standards of technical quality and therefore, we make sure these are kept free of allergens and are obtained mostly by natural processes from vegetable raw materials, minerals and other carefully chosen its origin, extraction methods and other important characteristics of these.

Our products are designed for different stages of implementation in the industrial process, from the collectors, who benefit from our line called VegaFresh™ processors until they have at their disposal a wide variety of products such as the PreserFood™, LactoLife™ or FruitFresh™ to the marketer that has other like the well known SterilFood™ as the homemaker to which our product lines are offered with different presentations of the same compounds.

Our products can be consumed by virtually all ethnic groups present on the planet. This ensures that our raw materials base and active ingredients from its origin possess the appropriate certifications Kosher, Halal, and the Muslim community, among others, and where these will be consumed.

High Quality Ingredients · Top Market Brands

Our expertise run into multiple applications in Food, Nutrition and Nutritional Health from fortification to infant formulas, dietary supplements, functional, Sports Nutrition, Hospital Nutrition and much more.

ND Pharma & Biotech

INDUSTRIAL DIVISION

We offer quality of service and support to industry and industrial sectors through this important division in the areas of quality, management, regulation, compliance and development, all basic pillars of the industrial progress and success, in a variety of sectors, fields and applications.

Innovative global solutions for the industry

Our company offers different advanced and imaginative solutions for the industrial, professional and artisan varied sectors from food, Feed, Pharma, Biotech or NCE's (Novel Chemical Entities) development to Special Molecules, including rare and ultra-rare all within an impressive array and product portfolio that is over 160.000 product references nowadays.

From most classic raw materials to the most advanced ones, our developments and brand products are specially and specifically designed and engineered to help in the solve of any individual problem planted by our partners, clients, and collaborative industry in general.

We follow researching and growing up to offer to you every day the best within us, always. We observe permanently our goals and mission as company and of course our strict values, far more than just a business philosophy. Deserving your trust and confidence.

ND Pharma & Biotech; Innovative Minds in Action

CUSTOM PRODUCTS

THE INDUSTRIAL DIVISION

Our Industrial Division is comprised by different sections from Project Management to the provision of products and services at very different scales.

To evaluate the possibilities and options that we can offer to help your business to grow, please contact us in write to the following e-mail address. One of our personal attendants will contact you back.

CONSUMER PROTECTION

Fortunately, consumers are more committed every day to protect their health and the health of their families, as well as the knowledge of those healthy or harmful elements from different types of industries that can affect (and the food industry is one of these). Therefore at ND Pharma & Biotech, we are fully committed to health, health protection and consumers in general, within a business philosophy consistent with the times and the changes that these new times behave in terms of energy conservation, sustainability and distribution and optimization of available resources, as we are aware that these are not eternal.

From a selection of our range of products and multiple lines, ND Pharma & Biotech provides customers the opportunity to work closely with our scientists, in order to achieve developments and products that meet the needs of our customers are demanding.

This service, despite being generally available and accessible to any company or customer (potential or actual) is a restricted service for existing customers of our company, so there is no commitment to provide this service or provide any other person or company, except that such services are performed by our scientific department under contract or specific agreement.

The development of customized products is an arduous, complex seen from the point of view of technology and resources, and therefore be reserved as a reward for loyalty and trust of customers who really have a clear business vision and social responsibility convergent with our company interests, especially with regard to the elimination of production lines, chemical toxic elements harmful or detrimental to the health of consumers.

CREATING VALUE WITHIN YOUR COMPANY

The use of our products, preparations and compounds, means for the producer, the merchant and the consumer not only a guarantee of freshness, quality and durability of the products your company produce or sell. In fact, the use of our products provides added value difficult to assess in advance by the customers themselves, but that is evident and manifest for our users as they grow, and outlook, increasing their margins, (the longer the duration less waste and therefore less impact on losses), increasing sales, (actually more durability means to reach more markets and distances), and providing their own brand of a guarantee of food security and health which until now was difficult to achieve or simply impossible to obtain.

At each step, our own customers report discoveries and improvements that had not even discovered in our research and in fact, can only be found when our products are applied on the ground, and under the complex and harsh conditions that each producer, processor or manufacturer knows and lives every day and in his own skin. Thus, recent studies show that our products, in example, added to infant formula and other milk preparations help fight (especially in certain countries) diarrheal disease, or causes the reduction of by-products such as acrylamide or GEA when food sources are subject either during processing or in cooking at temperatures above 100 degrees Celsius, with the consequent benefit to the general population health.

Occasionally, our products are used by manufacturing companies, such as stabilizers and reinforcements net nutritional food commodities for disadvantaged populations or people with special nutritional needs (PARNUTS), reasons why the European authority on food safety, has ranked some of our components or active ingredients as natural and suitable to provide these groups (patients, diabetics, children, immune-compromised, developing countries, etc..) part of the nutritional requirements they need.

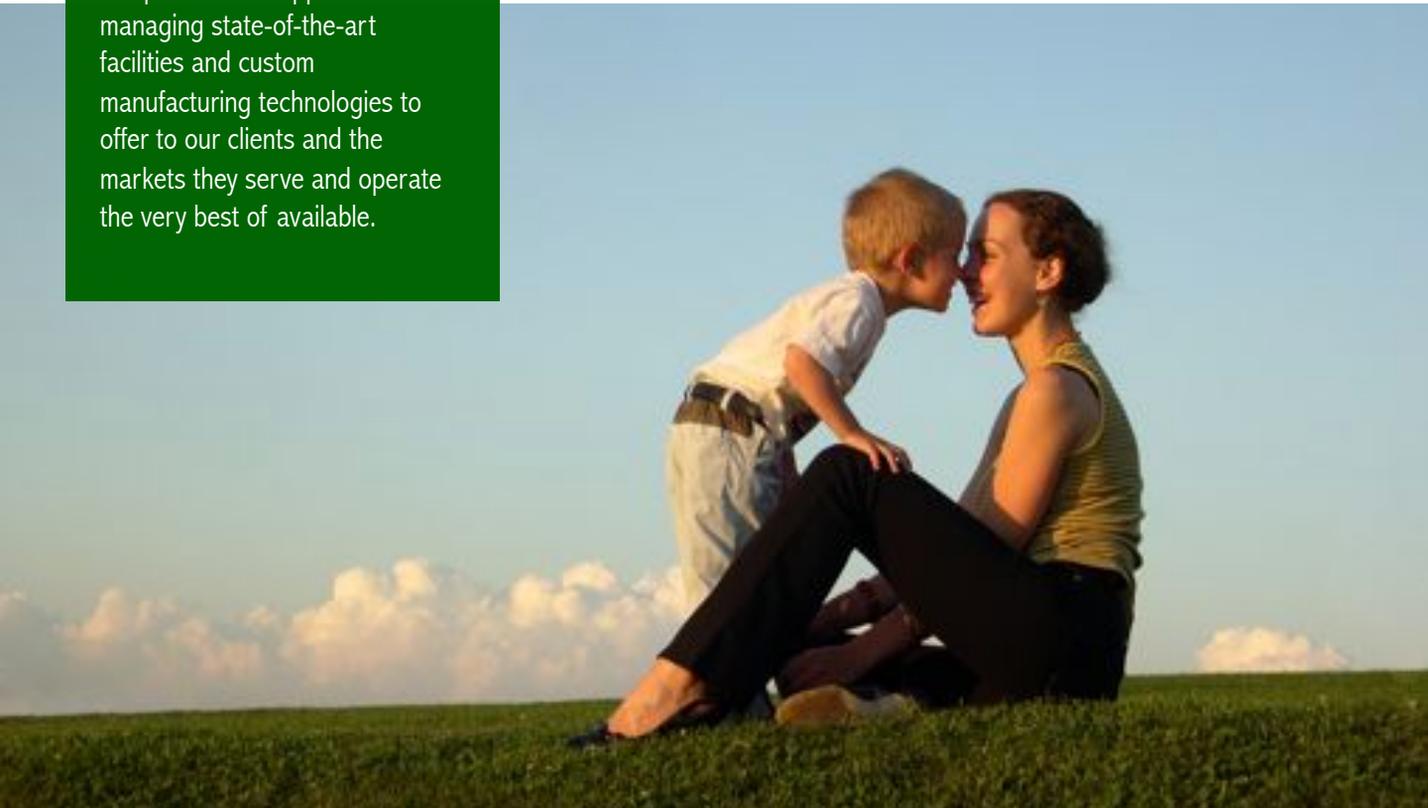

The creation of value in those companies among our clients, ultimately resulting in an actual and target levels and degrees of satisfaction by both parties, and the security and confidence that together, we took our committed to the standards of excellence that we desire. Excellence is undoubtedly one of our goals.

ND Pharma & Biotech

CHEMICAL DIVISION

Our offer of chemicals, API's and other molecular solutions is based on experience, trust, quality and reliable sourcing of materials. We partner with companies and suppliers managing state-of-the-art facilities and custom manufacturing technologies to offer to our clients and the markets they serve and operate the very best of available.

World class and ultra premium manufacturing of active ingredients creating value within every client and market that we enter...

From construction and building to life sciences, from medicine to agriculture, ND Pharma & biotech is offering solutions that deliver high-performance, cost-effective raw materials and advanced science performance. We have a strong commitment with those products that enable customers to optimize production reliability with high quality delivery service, enter new applications in the market through innovative materials and to expand their markets by adding higher performance to their products.

All areas of the business, starting from raw materials over high performance to protection and materials properties extension is operated under high standards for quality control and quality assurance.

Our Chemical Division can deal almost with every existing molecule and material on the planet. We offer also counseling service and consulting services for new developments and directed and fully experienced project management under contracting.

Formulation, Preservation, Sustainable Innovation

THE CHEMICAL DIVISION

We pray for the use of sustainable and green chemical production systems and methods. We embrace the Green Chemical initiative from our natural inception and creation as independent company. We promote and establish as the leaders in the field different eco-friendly and sustainable initiatives within the different sector we are.

CHEMICALS FROM A to Z.

Our compromise goes further than the compromise with the quality of a particular product. It's a firm bet for perfection of a complete line of products and services. Such products, for instance are tailor-made manufactured and composed by completely audited and inspected sources, quality verified, the vast majority classified under GRAS or GRAS self affirmed as it happens within the Food & Nutrition fields by European and North American regulatory bodies, and certified by GMP/EP/USP/ cGMP, etc., as it happens within our nutraceuticals, health ingredients, API's, and all the others in house.

GENERAL CHEMICALS CATALOGUE

We offer not only a selection of products, ranging between our more than 160.000 references. We offer also the opportunity of co-work with our teams of technicians, scientists, researchers and other valued personnel, hand by hand to reach goals, and development of innovative products that may fulfill with all the needs of our beloved clients. That service, despite the fact that is generally available for customers, and being accessible to any potential interested customer/candidate is in a certain way restricted to a certain clients of our company accomplishing a number of requisites.

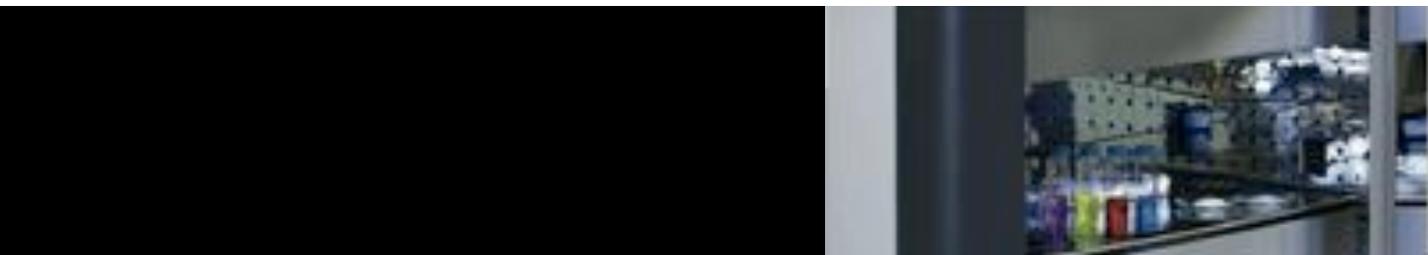

TAILOR-MADE PRODUCT DEVELOPMENT

The use of our products, preparations and compounds, means for the producer, the merchant and the consumer not only a guarantee of freshness, quality and durability of the products your company produce or sell. In fact, the use of our products provides added value difficult to assess in advance by the customers themselves, but that is evident and manifest for our users as they grow, and outlook, increasing their margins, (the longer the duration less waste and therefore less impact on losses), increasing sales, (actually more durability means to reach more markets and distances), and providing their own brand of a guarantee of food security and health which until now was difficult to achieve or simply impossible to obtain.

At each step, our own customers report discoveries and improvements that had not even discovered in our research and in fact, can only be found when our products are applied on the ground, and under the complex and harsh conditions that each producer, processor or manufacturer knows and lives every day and in his own skin. Thus, recent studies show that our products, in example, added to infant formula and other milk preparations help fight (especially in certain countries) diarrheal disease, or causes the reduction of by-products such as acrylamide or GEA when food sources are subject either during processing or in cooking at temperatures above 100 degrees Celsius, with the consequent benefit to the general population health.

Occasionally, our products are used by manufacturing companies, such as stabilizers and reinforcements net nutritional food commodities for disadvantaged populations or people with special nutritional needs (PARNUTS), reasons why the European authority on food safety, has ranked some of our components or active ingredients as natural and suitable to provide these groups (patients, diabetics, children, immune-compromised, developing countries, etc..) part of the nutritional requirements they need.

The creation of value in those companies among our clients, ultimately resulting in an actual and target levels and degrees of satisfaction by both parties, and the security and confidence that together, we took our committed to the standards of excellence that we desire. Excellence is undoubtedly one of our goals.

ND Pharma & Biotech

AGRICULTURE
FISHERIES
CROP PROTECTION
...and MORE

We offer a number of solutions from crop protection to fisheries, manufactured products, agrochemicals, chemical intermediates, and Biotech cutting edge advances as the STD-Microgene (Salt Tolerant Development Plants), a revolution within the field for coastal and sea-salt affected lands.

Custom product development is a difficult and technological complex issue, and also a demanding task from every point of view...

We are extremely successful within the product development area, from the very simple blending and mixture formulas to the differential presentations, solid, liquids, solution, etc. We offer trade and scale commerce of branded products including general chemicals, certain commodities and other referenced materials in virtually all kind of packaging formats. We provide a specific catalogue and our technical teams are ready to offer counseling and updating our customers with the latest developments and technologies available.

Our customers may explore within our complete and highly extensive reference´s library of products including but not limited to +600 Trading Products, +12.600 AP´s, +68.000 Molecules and Combinations and the Spectacular library of + 150.000 NCE´s (Novel Chemical Entities), that are our best kept widespread secret asset nowadays.

We care for our customers deeply and thorough.

THE AGRIBUSINESS DIVISION

We offer confidential consultative services to each project providing insight critical to commercial success. We help customers bring products to market faster and more effectively by sharing our extensive formulation and regulatory expertise.

UNIQUE SOLUTIONS INNOVATION

Our portfolio includes innovative solutions, including naturally derived materials from renewable resources. Our solutions assure and improve product safety providing guaranteed quality for consumers. We leverage our strengths in microbial control, nutrition, biosciences and target unmet needs of the personal care industry. We contribute to innovation in many fields through leading-edge, multifunctional ingredients that expand the claims for your brands and create new formulation possibilities and product extension functionalities.

Partner of Choice

ND Pharma & Biotech continues to be the partner of choice for customers looking for an edge in the chemical, biological, pharmaceutical and biotechnology markets. Our industry-leading products and services have helped companies of every size, at every stage of development increase quality, enhance their manufacturing processes, remove bottlenecks, reduce time to results, improve regulatory compliance, and lowering costs. Our broad experience in several fields and techniques from advanced chemical and peptide synthesis to cellular and gene therapies allow our customers to advance their products to market faster and more efficiently.

Practical Knowledge

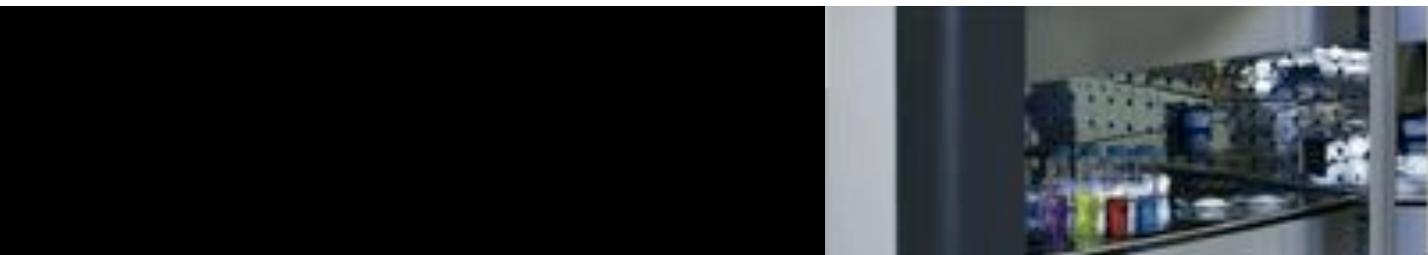

As service providers, we understand the day-to-day challenges pharmaceutical and biotechnology innovators face, and we're driven to find answers. Often this means delivering one of our cutting-edge products, such as a sustainable alternatives. Other times, it means leveraging our broad-based manufacturing and development experience with small and large molecules, primary and stem cell expansion, protein design and cell-line construction to provide a tailored solution that meets your immediate and long-term objectives.

Innovation is in our nature.

It is the way we work, which is why we are able to offer the pharmaceutical and biotech market advanced technologies that transform life science into new possibilities. We recognize that every organization has unique needs and those needs are likely to change over time. So throughout our relationship, we innovate, we remain flexible, we adapt and we continue to adjust as goals change.

Taking You to the Next Level

At ND Pharma & Biotech, we continually strive to enhance our offering to meet growing customer demands for next generation therapeutics. Our latest developments, agreements and partnerships with leading —edge high class performance multi-billion dollar companies demonstrate our commitment to the life-science market. At any stage of your program — whether investigating a new drug compound, choosing a lead candidate, optimizing a process, scaling-up, or evaluating the quality and safety of products, our life-cycle management experience and innovative solutions give you the peace of mind you expect.

ND Pharma & Biotech

The COMPANY

We are a private, family-owned company limited by shares. We include some subsidiaries, partner companies and development initiatives and start-up project divisions and sub-division including licensing agreements with top class/high profile institutions worldwide.

Principal activity of the company in the research, development and innovation, within every area of science and technology, especially biopharmaceutical, food-nutrition-healthcare-agribusiness and other related, including but not limited to this areas, with divisional societies and subsidiaries in some other fields of innovation and research, from water technologies to the manufacturing of consumer products, licensing of patents, brands, industrial secrets, utility models and any other form of proprietary IP.

ND PHARMA & BIOTECH LTD., is incorporated in England & Wales with Registration Number 08273797 which is also the main country of operations for administrative and social purposes. The Company is developing active industrial and commercial promotion and activity in several regions characterized by geographical areas, Europe, Africa and Mid-East Countries (EMEA), Asia, and The Americas, with representatives in these areas established and other in constant expansion and growing.

ND PHARMA & BIOTECH

is a Private Company Limited by Shares. The Company Directors esteemed the public launch of the company (IPO) within the AIM of the London Stock Exchange, could be consistent with provisions to the mid-year of 2015. In the meanwhile The Company and company directors, are making every possible effort to accomplish with existing regulations and maximum transparency to offer the interested or potential investors every possibility of taking contact with the company, its values and objectives, mission, vision and proceedings, market areas and sectors, products, etc. to let them to get formed a complete frame prior to IPO and/or any other purposed public market initiative.

Despite this it must be clear that company shares are not on sale, unless private funding interest from certain investors that are part of the shareholders from the very beginning and true company incorporation. Other investment options exists for company divisional societies and subsidiaries, that may be considered and/or treated on a case by case bases. No total or partial information contained within this website and/or other company websites and informational or corporate leaflets, flyers or webpages should be taken as invitation to treat or buy offer of shares, stocks and/or any other form of participation within the company capital, neither a pre-offer facing a future initial public offering (IPO). The company reserves every right over the shares, information, or any other considered within the private sphere of company operations. Notwithstanding, this information is intended to offer transparent image and in compliance with good company practices manuals for public companies.

During our first several years, ND PHARMA & BIOTECH operated as a "virtual" company which comprised a geographically diverse network of academic scientists, healthcare professionals, patient advocacy groups and business people.

Although the company has matured and many of our employees are based at our headquarters in London, UK we've remained true to our origins as a collaborative enterprise — both within the company and with external partners with whom we share a sense of mission.

This unusually high level of teamwork has contributed substantially to our ability to innovate successfully, from product identification to preclinical, clinical and commercial development.

As you browse through ndpharmabiotech.com and learn more about our company and the people who are working to bring important new therapies to people with different diseases and disorders, I hope what stands out is that our sense of commitment to medical innovation and patient benefit is as strong today as it was back in our foundation years as young researchers and innovation leaders, when we started with two employees and a vision in our travel suitcase.

We've spent a number of years dedicated to clinical work, research, development and teaching activities, as dedicated teachers, clinicians and investigators. From that primitive times, we have conserved our passion, drive, devotion and the illusion of contributing to improve the lives of those that matters to us, our beloved ones.

This is why we do what we do, to make life better. This is why we are what we are now. ND Pharma & Biotech, true and pure spirit of a family company.

Becoming ND Pharma & Biotech

ND Pharma & Biotech is a leader in addressing these challenges, with an expanded focus and horizon on biologics and targeted medicine. We use our knowledge and expertise to develop therapies and products that address difficult conditions affecting significant populations. Our priority is "patient needs come first" to help them to reach and control healthier lives, as part of the plans to make life better.

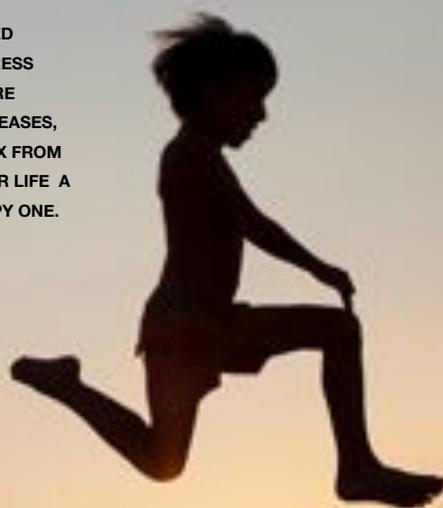

ND Pharma & Biotech has a solid scientific foundation, financial muscle and a strong and ever-evolving product portfolio. We are on the way of a series of new product pipeline that provide us with the resources we need today and form the long term thinking period.

Our senior leadership really understood how to manage a growing company and the related individuals that in one way or another are working to make this company the great one it is. We agreed to call them collaborators.

Our global footprint reach customers in 45 countries around the globe.

ND Pharma & Biotech

IS A GLOBAL BIOPHARMACEUTICAL COMPANY FOCUSED ON DEVELOPMENT OF ADVANCED THERAPIES THAT WILL ADDRESS SOME OF THE WORLD'S MORE COMPLEX AND SERIOUS DISEASES, HELP TO REMOVE CHEM-TOX FROM FOOD CHAIN, AND MAKE OUR LIFE A HEALTHY, BETTER AND HAPPY ONE.
